

# NORD EcoFresh Tank

DHW storage tanks with special anti-corrosion high-temperature ceramic enamel for superior water heating.

## TECHNOLOGY FOR MAXIMUM PERFORMANCE AND SAVINGS

The specially designed heat exchanger with an elliptical cross-section significantly increases the heat exchange surface compared to conventional storage tanks. This innovative solution, developed for use with NORD EcoHeat heat pumps and the NORD EcoControl energy management system, enables faster hot water production than other storage tanks of the same capacity.

## EXCHANGER OF A NEW DIMENSION

The elliptical exchanger's unique manufacturing process allows the tube to be flattened and wound while maintaining all of its structural, strength and performance characteristics.

## SLIM STORAGE TANK DESIGN

The narrow shape of the tank was designed with space saving in mind to make the most of the limited space in the utility room.
